

*Molecular Mechanisms of Chemotaxis to Sodium Chloride in Caenorhabditis elegans*

*Servaas N. van der Burght*

This work is part of the research program of the Foundation for Fundamental Research on Matter (FOM), which is financially supported by the Netherlands Organization for Scientific Research (NWO).

# **Molecular Mechanisms of Chemotaxis to Sodium Chloride in *Caenorhabditis elegans***

Moleculaire mechanismen van chemotaxis naar  
natriumchloride in *Caenorhabditis elegans*

## **Proefschrift**

ter verkrijging van de graad van doctor aan de  
Erasmus Universiteit Rotterdam  
op gezag van de rector magnificus

Prof.dr. R.C.M.E. Engels

en volgens besluit van het College voor Promoties.  
De openbare verdediging zal plaatsvinden op

Woensdag 17 juni 2020 om 9.30 uur

door

**Servaas N. van der Burght**  
geboren te Rotterdam

## **Promotiecommissie**

### **Promotor**

Prof.dr. D.F.E. Huylebroeck

### **Overige leden**

Prof.dr.ir. N. Galjart

Dr. H. Lans

Prof.dr.ir. E.J.G. Peterman

### **Copromotor**

Dr. G. Jansen

# Contents

<b>Chapter 1</b>	7
Introduction	
Scope of this thesis	
<b>Chapter 2</b>	25
Signaling compartment at the ciliary tip is formed and maintained by intraflagellar transport and functions as sensitive salt detector	
<b>Chapter 3</b>	55
Mechanism of life-long maintenance of neuron identity despite molecular fluctuations	
<b>Chapter 4</b>	93
Correlating fluctuations in gene expression with behavioral variability in the chemotaxis response of <i>Caenorhabditis elegans</i> to NaCl	
<b>Chapter 5</b>	117
General Discussion	
<b>Appendix</b>	133
Samenvatting	
Summary	
Curriculum vitae	
PhD portfolio	
Dankwoord
